

ROSHAN LOUHAR [SENIOR FULL-STACK ENGINEER]

+91 8003644328 | ROSHAN.LOUHAR@GMAIL.COM | [PORTFOLIO](#) | [LINKEDIN](#) | [GITHUB](#)

SUMMARY

Certified **Microsoft** developer with 12+ years of experience building distributed, scalable, cloud-first solutions on Azure across **media streaming, healthcare, banking, e-commerce, HR/payroll**, and enterprise digital transformation. Strong background in **full-stack engineering (.NET + React/Angular), microservices, serverless, event-driven architecture, CI/CD, security/compliance**, and system design (HLD/LLD).

Proven track record leading delivery on complex engagement driving performance optimization, quality gates (Sonar/service sonar), SRE practices (SLI/SLO), and mentoring teams. Hands-on in AI-driven development (GitHub Copilot) and building cloud-native architectures with Azure services.

I'm actively seeking **software engineering (Senior/Staff)** and **Technical Architect** roles to leverage my expertise.

EXPERTISE

Core Tech: C#, .NET (6/8/10), Rest API, MVC, Bootstrap, Material UI, Azure Functions/Durable Functions, ReactJS, TypeScript/JavaScript, Redux, EF Core, LINQ, SQL/NoSQL, REST, MVC, Unit Testing, Async Programming

Cloud / Azure: APIM, App Service, Azure Functions, Durable Orchestration, Key Vault, App Configuration, Cosmos DB, Azure SQL, Redis Cache, Storage, Event/Streaming, Monitor/KQL

Architecture & Practices: Microservices, Serverless, CQRS, SOLID, Design Patterns, Cloud Design Patterns, Security-by-design, Performance engineering, HLD/LLD, Agile/Scrum, Code Reviews, Mentoring

DevOps / Quality: Azure DevOps, GitHub Enterprise, CI/CD pipelines, SonarQube.

AI / Learning: Azure OpenAI (learning), RAG/Agentic concepts (learning), GitHub Copilot, Docker, Azure Kubernetes

WORK EXPERIENCE

MICROSOFT, Hyderabad, IN (Jan 2018 – Present)

Full Stack Developer

Led and contributed to the design, development, and delivery of large-scale Azure cloud solutions across healthcare, media streaming, energy, public sector, and enterprise domains using .NET, React, microservices, and serverless architectures.

- Owned **end-to-end feature delivery** for mission-critical systems (healthcare AI platforms, media streaming telemetry, energy portals), from design to production readiness.
- Improved **system performance and reliability** through database optimization, caching strategies (Redis/APIM), and Azure Function refactoring in high-throughput environments.
- Established strong **engineering quality standards**, including CI/CD automation, SonarQube quality gates, test coverage improvements, and security remediation.
- Acted as a **technical mentor and product owner proxy**, influencing design decisions, improving onboarding, and driving consistent engineering practices across teams.

VIRTUSA, Gurgaon, IN (Aug 2016 – Jan 2018)

Full Stack Consultant

worked as a hands-on Software Engineer contributing to the development of enterprise banking pricing and decision-making platforms.

- Translated business requirements into technical designs, collaborating closely with clients, product owners, and analysts during requirement workshops and sprint planning.
- Led feature implementation and bug resolution using ASP.NET MVC, Entity Framework, LINQ, and Oracle, ensuring adherence to architecture, performance, and code quality standards.
- Improved team efficiency by supporting CI/CD automation pipeline definition and mentoring peers during development and debugging activities.
- Actively participated in design discussions, estimations, and Agile ceremonies, enabling predictable delivery and high-quality releases.

CLAVAX LLC, Gurgaon, IN (Nov 2015 – July 2016)

Senior Associate Programmer

Worked as a programmer on an e-commerce platform, Built and scaled e-commerce and order-management platforms powering online book purchases and warehouse operations, integrating multiple external vendors into a unified backend system.

- Upgraded the ASP.NET WinForms to MVC with Angular and migrated the database from on premises to Azure cloud.
- Built e-commerce and order automation platforms integrating Amazon, eBay, Abebooks, PayPal, and Selenium automation. Integrated the PayPal and Cyber credit API for verifying credit card information for Online Payment.
- Implemented workflows using web Job and Data factory to reduce data processing time and automated the process.

E-CONNECT SOLUTION PVT LTD, Udaipur, IN (July 2014 – Oct 2016)

Software Developer

Contributed to the digital transformation of state government projects as a member of the web development team, focusing on project baselining and architecture setup.

- Developed the business tier and data access layer design for multiple web applications from scratch, enhancing system architecture and performance.
- Implemented a user management system for a reusable role/rights library, improving access control and security.
- Created a JavaScript validation library, exception handling mechanisms, and SMTP utility, increasing code efficiency and reliability.
- Developed custom search controls to reduce time and effort across applications, streamlining the development process.
- Prepared comprehensive project specification documents for project releases, ensuring clear communication and alignment with stakeholders.

NOTABLE PROJECT

HealthCare System – AI-Based Surgical Risk Prediction

Built and led delivery of an AI-driven healthcare platform to predict knee/hip surgery risk, designing scalable architecture, React UI, and Azure-based backend while leading a 4-member engineering team.

Media Streaming – Mission Control Dashboard

Developed real-time monitoring and incident dashboards for live NBA game streaming, enabling proactive issue detection, telemetry visualization, and operational decision-making during live events.

MTN – Data Masking Platform

Engineered a high-throughput data masking service processing 60M+ records/day, optimizing Azure Functions, caching, and APIs to significantly reduce processing time and latency.

ACC (City Council) – Digital Citizen Portal

Led frontend architecture and CI/CD improvements for a large-scale citizen services portal, integrating CMS, APIM, secure configurations, and accessibility-compliant UI.

Virtusa – Banking Pricing & Decision Systems

Developed and enhanced banking pricing and decision-making platforms, translating business rules into scalable backend solutions with ASP.NET MVC and Oracle in Agile environments.

CLAVAX LLC – E-Commerce & Automation Platform

Built e-commerce and order automation systems integrating multiple vendors and payment gateways, automating purchasing workflows and modernizing legacy applications to Azure.

E-Connect Solutions – Government ERP Systems

Delivered state-level ERP, HRMS, payroll, and grievance platforms, focusing on role-based access, reusable frameworks, and scalable backend architecture.

CERTIFICATION

- ★ GHCP CERTIFIED DEVELOPER
- ★ MICROSOFT AI ENGINEER ASSOCIATE
- ★ MICROSOFT AZURE ADMINISTRATOR ASSOCIATE
- ★ AZURE DEVELOPER ASSOCIATE
- ★ MCSA: WEB APPLICATIONS
- ★ MCSA: CLOUD PLATFORM
- ★ MICROSOFT CERTIFIED: SECURITY, COMPLIANCE, AND IDENTITY FUNDAMENTALS
- ★ MICROSOFT AZURE AI FUNDAMENTALS

ACHIEVEMENT

- ★ BEST PROJECT CONSULTANT AT MICROSOFT
- ★ BEST CONSULTANT AT VIRTUSA
- ★ SPOT AWARD AT VIRTUSA

EDUCATION

B. TECH in CSE [70 %] From GEETANJALI INSTITUTE OF TECHINICAL STUDY (RAJASTHAN TECHNICAL UNIVERSITY)
